

EVACMAX™

Fully automated evacuation system

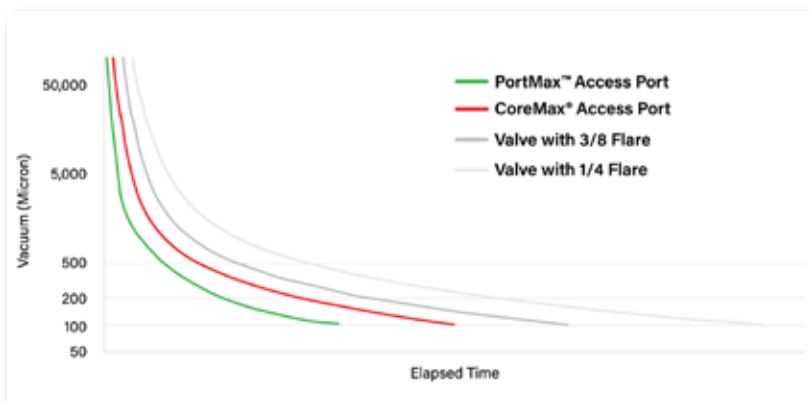

SCAN ME

fastestinc.com/evacmax

CUT EVACUATION TIMES IN HALF.

Drastically improve evacuation times

Real-time process monitoring and downloadable data logging

Hands-free automated evacuation and pressure decay testing

Quickly identify problems and optimize your evacuation process

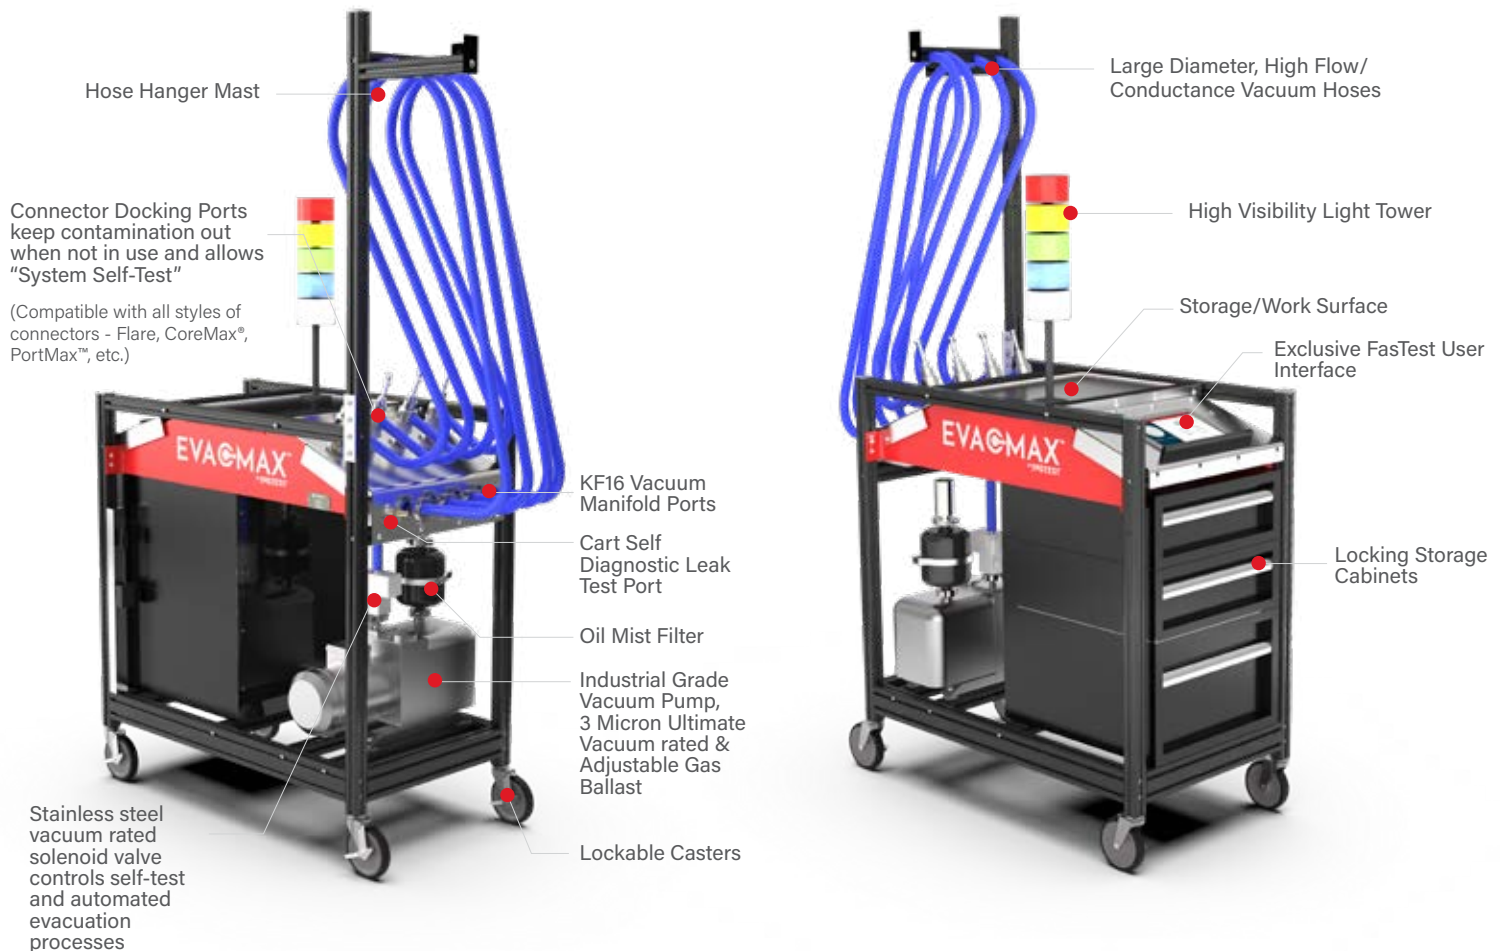

Applications:

- Industrial Refrigeration
- Commercial Refrigeration
- Air & Water Cooled Chillers
- Cold Chain Systems
- VRV / VRF Split Systems
- Refrigerated Air Handlers
- And Many More...

- 1** **Set**
target vacuum, vacuum decay and number of retry parameters.
- 2** **Start**
the evacuation.
- 3** **Go**
EvacMax™ will do the rest.

EvacMax™ automatically:

- Pumps down to the target vacuum level that has been programmed, and if target is reached, begins a vacuum decay test.
- Repeats the cycle a predetermined (set) number of times until the refrigeration system either passes or EvacMax™ signals a repeated failure informing the technician that further investigation for leaks or excessive moisture (and possible nitrogen purge) is required.
- Signals either a successful completion of the process or a failure via the high visibility light tower.
- Records the entire process to a downloadable data file.
